

ALESIA CHERNIKOVA

Postdoctoral Research Associate, Northeastern University, Boston, USA

a.chernikova@northeastern.edu — 1-781-350-0139 — LinkedIn — achernikova.github.io — Google Scholar — GitHub

SUMMARY

ML researcher and engineer specializing in graph neural networks and AI reliability – adversarial robustness, uncertainty quantification, mechanistic interpretability. Built scalable graph analytics pipelines for AWS cloud activity tracing and anomaly detection. Ten years of research experience and four years of industry software engineering. Strong in Python/Scala, PyTorch/JAX/TensorFlow, and Spark.

SELECTED HIGHLIGHTS

- **Uncertainty Quantification and Adversarial Robustness in Message-Passing Neural Networks (MPNNs):** developed an analytic uncertainty propagation framework for MPNNs and derived probabilistic certified adversarial robustness radii for node classification. [NeurIPS 2025 workshop: NPGML.]
- **MPNNs Generalization Bound under Node Feature Uncertainty:** introduced a covering number-based generalization bound for MPNNs with uncertain node features, leveraging geometry of the Wasserstein subspace associated with the sample space. [Under submission.]
- **Mechanistic Interpretability of Large Language Models (LLMs):** designing automatic circuit extraction methods from LLM attribution graphs to enable interpretable and controllable model behavior. Investigating how LLMs process and generate information to improve output quality and reliability. [Current work in progress (GitHub).]
- **AI Security in Safety-Critical Domains:** created an optimization-based evasion attacks framework that preserves feature dependencies, enabling realistic attacks and robustness evaluation in constrained domains such as cybersecurity and healthcare; introduced adversarial attacks against deep neural networks for steering angle prediction in self-driving cars. [ACM TOPS 2022 (GitHub), IEEE S&P 2019 workshop: SafeThings (GitHub).]
- **Scalable Security Graph Analytics:** built scalable algorithms for tracing AWS cloud activity as a heterogeneous graph and developed methodology for lateral movement detection using Bayesian statistics and network science perspectives. [AWS internal conference 2021.]

EDUCATION

Northeastern University, Boston, USA, Doctor of Philosophy in Computer Science 09/2017 — 04/2024
Advisor: Alina Oprea, “Cyber networks resilience against adversarial attacks”. GPA: 3.9/4.00

Belarusian State University, Minsk, Belarus, Bachelor of Science in Applied Mathematics 09/2009 — 06/2014
Advisor: Vladimir Malugin, “Development of risk management algorithms based on derivatives contracts”. GPA: 3.8/4.00

ACADEMIC EXPERIENCE

Northeastern University, RADLAB, DK-Lab Boston, USA
Postdoctoral Research Associate 05/2024 — Present

- Developed a framework to quantify uncertainty in Message Passing Neural Networks (MPNNs), derived probabilistic certified adversarial robustness radii of MPNNs for the node classification task, and introduced a novel covering number-based generalization bound for the node classification task in MPNNs under uncertainty in node features.
- Design automatic circuit extraction from the attribution graphs to reason about the mechanistic interpretability of Large Language Models.
- Develop novel deep learning architectures based on the geometry of derandomized hyperbolic graphs to improve efficiency and generalization.

Northeastern University, NDS2 Lab Boston, USA
Research Assistant 09/2017 — 04/2024

- Introduced a new compartmental model of epidemiology to represent self-propagating malware (SPM) propagation in networks using real-world WannaCry traces. Rigorously studied the characteristics of the SPM propagation process under the homogeneous mixing assumption and on arbitrary networks.
- Designed new defense algorithms leveraging graph theory and extensively tested the behavior of existing defense techniques to improve the network robustness of large enterprise networks in the face of SPM.
- Developed a novel optimization-based framework for evasion attack algorithms that preserve possible feature dependencies to evaluate the robustness of deep learning models in constrained environments such as cybersecurity or healthcare. Evaluated the success of existing defense algorithms against the proposed attack methodology.

- Demonstrated first evasion attacks against classification and regression deep learning models in the domain of self-driving cars.

Amazon Web Services (AWS)

Boston, USA

Research Scientist Intern

05/2020 — 08/2020, 05/2021 — 09/2021

- Created a scalable algorithm for tracing the activity in the AWS cloud represented as a heterogeneous graph to allow further research based on AWS cloud activity data.
- Developed the methodology for lateral movement detection in the AWS cloud environment using Bayesian statistics and network science perspectives.

Belarusian State University (BSU)

Minsk, Belarus

Undergraduate Research Assistant

01/2012 — 12/2013

- Participated in a research project to create the methodology for estimating credit rankings of enterprises using clustering and factor analysis.
- Led the credit rankings estimation project for the building enterprise sector.
- Collaborated in developing the package for automated calculation of credit scores based on the proposed credit rankings evaluation methodology.
- Developed novel methodologies for hedging strategies using futures and interest-rate swap contracts.

PROFESSIONAL EXPERIENCE

IBA Group

Minsk, Belarus

Senior Software Engineer

11/2013 — 07/2017

- Participated in the development of a large-scale IBM GSAR web portal and maintained its performance.
- Assisted the software architect with the efficiency and usability improvement of the portal.

TEACHING EXPERIENCE

Northeastern University

Boston, USA

Invited Lectures for CS 7332: Machine Learning with Graphs

09/2024 — 12/2024, 09/2025 — 12/2025

- Designed and held lectures for a graduate-level course in Graph Machine Learning.

Northeastern University

Boston, USA

Teaching Assistant for CS4100: Artificial Intelligence

09/2022 — 12/2022, 09/2023 — 12/2023, 01/2024 — 04/2024

- Designed and held lectures for undergraduate and graduate students.
- Held weekly office hours to answer questions, provide support, and review course material with students.
- Graded assignments, exams, and research projects.
- Assisted professor with homework and exam preparation, proctored the exams.
- Advised students regarding research projects.
